

Professor Ferdinand Alexander Porsche founded his legendary design studio 50 years ago. It became the origin of the Porsche Design brand. F. A. Porsche's goal was to extend the sporty elegance and Porsche F. A. Porsche created design icons. For example, the lifestyle beyond the world of cars to other products. P'8478 from 1978. A milestone in eyewear, they were Always guided by the vision to combine form, functhe world's first sunglasses with an interchangeable tion, material and aesthetics into unique design oblens mechanism. This extraordinary masterpiece was a sensation from the start and the first major success jects, he wanted to create an iconic design that was honest, uncompromising and always committed to in a long line of eyewear innovations from Porsche the best possible solution. Only when design meets Design. That's reason enough to release a 50Y Edition of the P'8478 and its Squared Aviator variant P'8928 all these criteria is it truly Porsche Design. This year, we are celebrating 50 years of Porsche Design - 50 in 2022, each in a limited edition of 1,972 pieces. Both

versions are must haves. For Patrick Dempsey, too.

years of Engineered Passion.

P'8478 O – 50Y EDITION / BLACK AND PLATINUM GREY The legendary first Porsche Design glasses as a special high-f edition limited to 1,972 pieces. Striking matt black and matt p

EXPERIENCE 50 YEARS OF PORSCHE DESIGN.

Few sunglasses have achieved the same cult status as our P'8478, the world's first sunglasses with an interchangeable lens mechanism. They are the perfect manifestation of our design philosophy at Porsche Design, in which technical innovation, uncompromising function and reduction to the essentials interact perfectly. The wide range of interchangeable lenses in a multitude of colours allows the wearer to choose the lens best suited for the current lighting situation — in just a few seconds.

Heritage meets zeitgeist: to celebrate our 50th anniversary, we are releasing the legendary Iconic P'8478 and the P'8928 squared Aviator variant in a limited edition of 1,972 pieces with a matt black frame and matt platinum-coloured highlights. With a new, much flatter lens radius and interchangeable lenses in VISION DRIVE™ Polarized grey and olive, silver mirrored, our classic is ready for a new era. The 50Y Edition frames come in a premium 50Y box and with an exclusive genuine leather eyewear strap.

The frames of our Cyber Tec Series impress with a perfect combination of motorsport-inspired design and unique quality. The frame details are characterised by an unmistakably futuristic design: the temple ends of the Cyber Tec Series are modelled in the shape of the rear lights of the classic 911, the construction of the temples follows a dynamic, three-dimensional structure and underlines the automotive design of the Cyber Tec models.

The combination of stainless steel and high-performance RXP meets the highest demands for lightness and stability. In addition, the different surfaces and materials of the temple transitions and temples emphasise the three-dimensional design, creating a particularly striking look.

THE HEXAGON SERIES.

The design language of the Hexagon frames is inspired by the hexagonal screws used in the Porsche 911 GT3 engine block. The fronts of the P'8937 and the P'8938 Aviator version are milled from high-tech titanium and held in place by four hexagonal screws that are screwed in by hand. This distinctive detail gives the frames a decidedly masculine look and an unmistakable technical appearance. The use of titanium and high-performance RXP makes the frames lightweight and offers optimal fit and comfort. Combined with the perfect fit, an extraordinary wearing comfort is created.

Perfection continues past the design of the frames:

like all Porsche Design sunglasses, the Hexagon Series lenses feature our VISION DRIVE™ lens technology.

Furthermore certain colours are equipped with Polarized or Polarized XTR lenses. The high-tech Polarized

XTR lenses offer five outstanding features: UV400 protection, anti-glare, impact and scratch resistance, polarization and contrast enhancement. They make the Hexagon Series sunglasses the perfect companions for any road trip or off-road adventures. Even in difficult weather and light conditions.

SUPERIOR VISION DRIVET SUNGLASS LENS TECHNOLOGY.

When it comes to driving, Patrick Dempsey knows no compromise. That's why Porsche Design sunglass lenses with our innovative VISION DRIVE™ lens technology are a musthave for him on any road trip. Their innovative features provide the perfect driving experience and the best possible view from the cockpit. Our VISION DRIVE™ lenses convince with their outstanding quality and excellent imaging properties in all weather or light conditions. The Polarized XTR lenses provide a combination of innovative polarization and integrated contour and contrast enhancement, enabling you to keep track of every situation on the road.

Impact resistance and hard coating

SEE WHAT'S NEXT.

In the Spring Hinge Series, the hinge's unique technical sophistication is a perfect demonstration of F. A. Porsche's idea of outstanding design: the elegance of function. The open hinge design doesn't require a housing, revealing the ingenious secret of its technical solution and its functional mode of operation. The spring reduces the contact pressure of the temples and paired with the lightness of the frame

ensures particularly high wearing comfort. When open, the hinge blends in inconspicuously with the appearance of the frame. The frames of our Spring Hinge Series are manufactured in Japan with the highest precision and use of ultra-light titanium. Both as sunglasses and prescription frames, they ensure a perfect visual experience.
