Rodenstock Eyewear 2023

BALANCE

Our frames combine innovative materials, elegant design and the finest craftsmanship. A balance of over 140 years of experience, timeless design and advanced technology. With the help of the Rodenstock high-tech video centring system, we design premium eyewear based on data from a wide variety of facial topographies. The result is masterpieces of precision that ensure a perfect fit and optimum wearing comfort. An experience across all the senses.

LAMBDA LENS TECHNOLOGY

More Details. Sharper vision. Lambda Lens Technology is designed to enhance contrast with colours that empower both depth and detail.

Contrast is created by ensuring that less blue light is let through the lens.

The colours in Lambda Lens Technology sunglass lenses are fine-tuned to optimise the level of contrast. With a guide on different colour feels and contrast levels, the Colour Contrast Index helps find the sunglass lens colour that's exactly the right fit, depending on the individual's needs.

25%

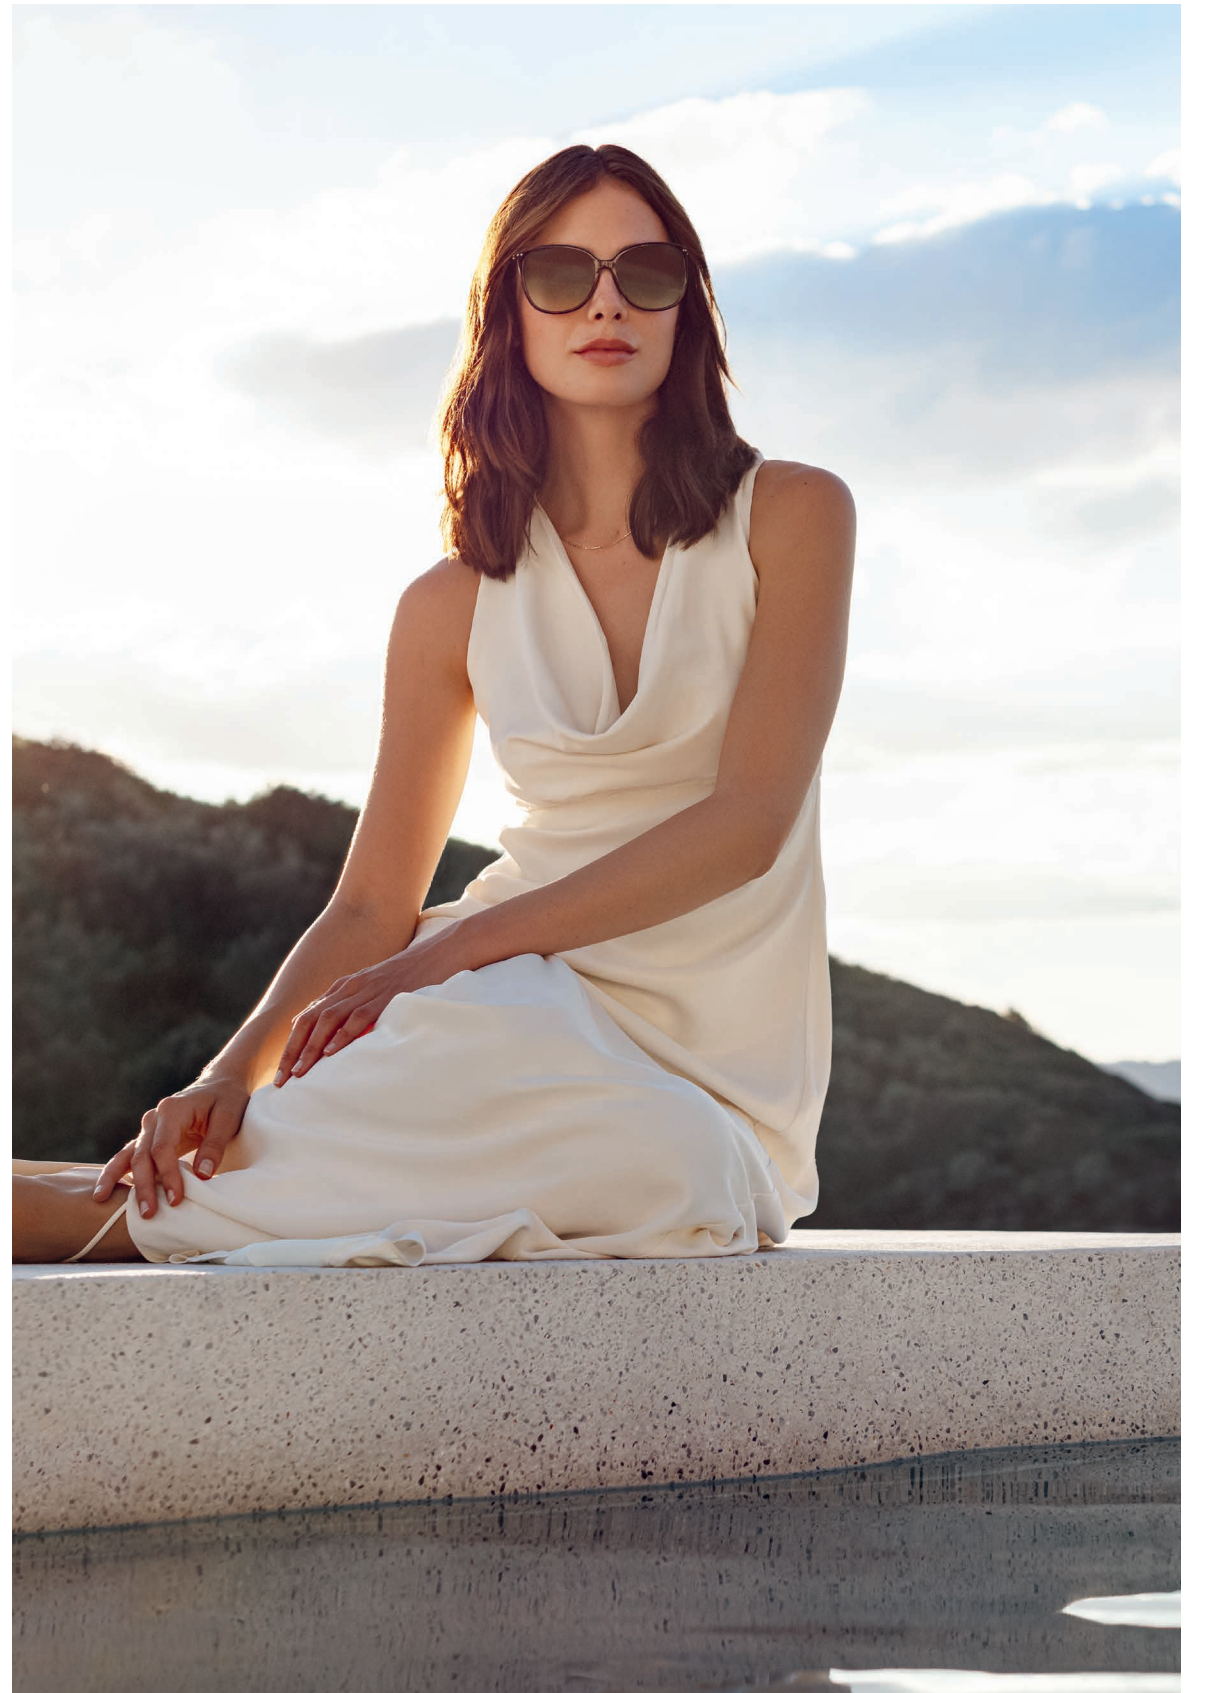

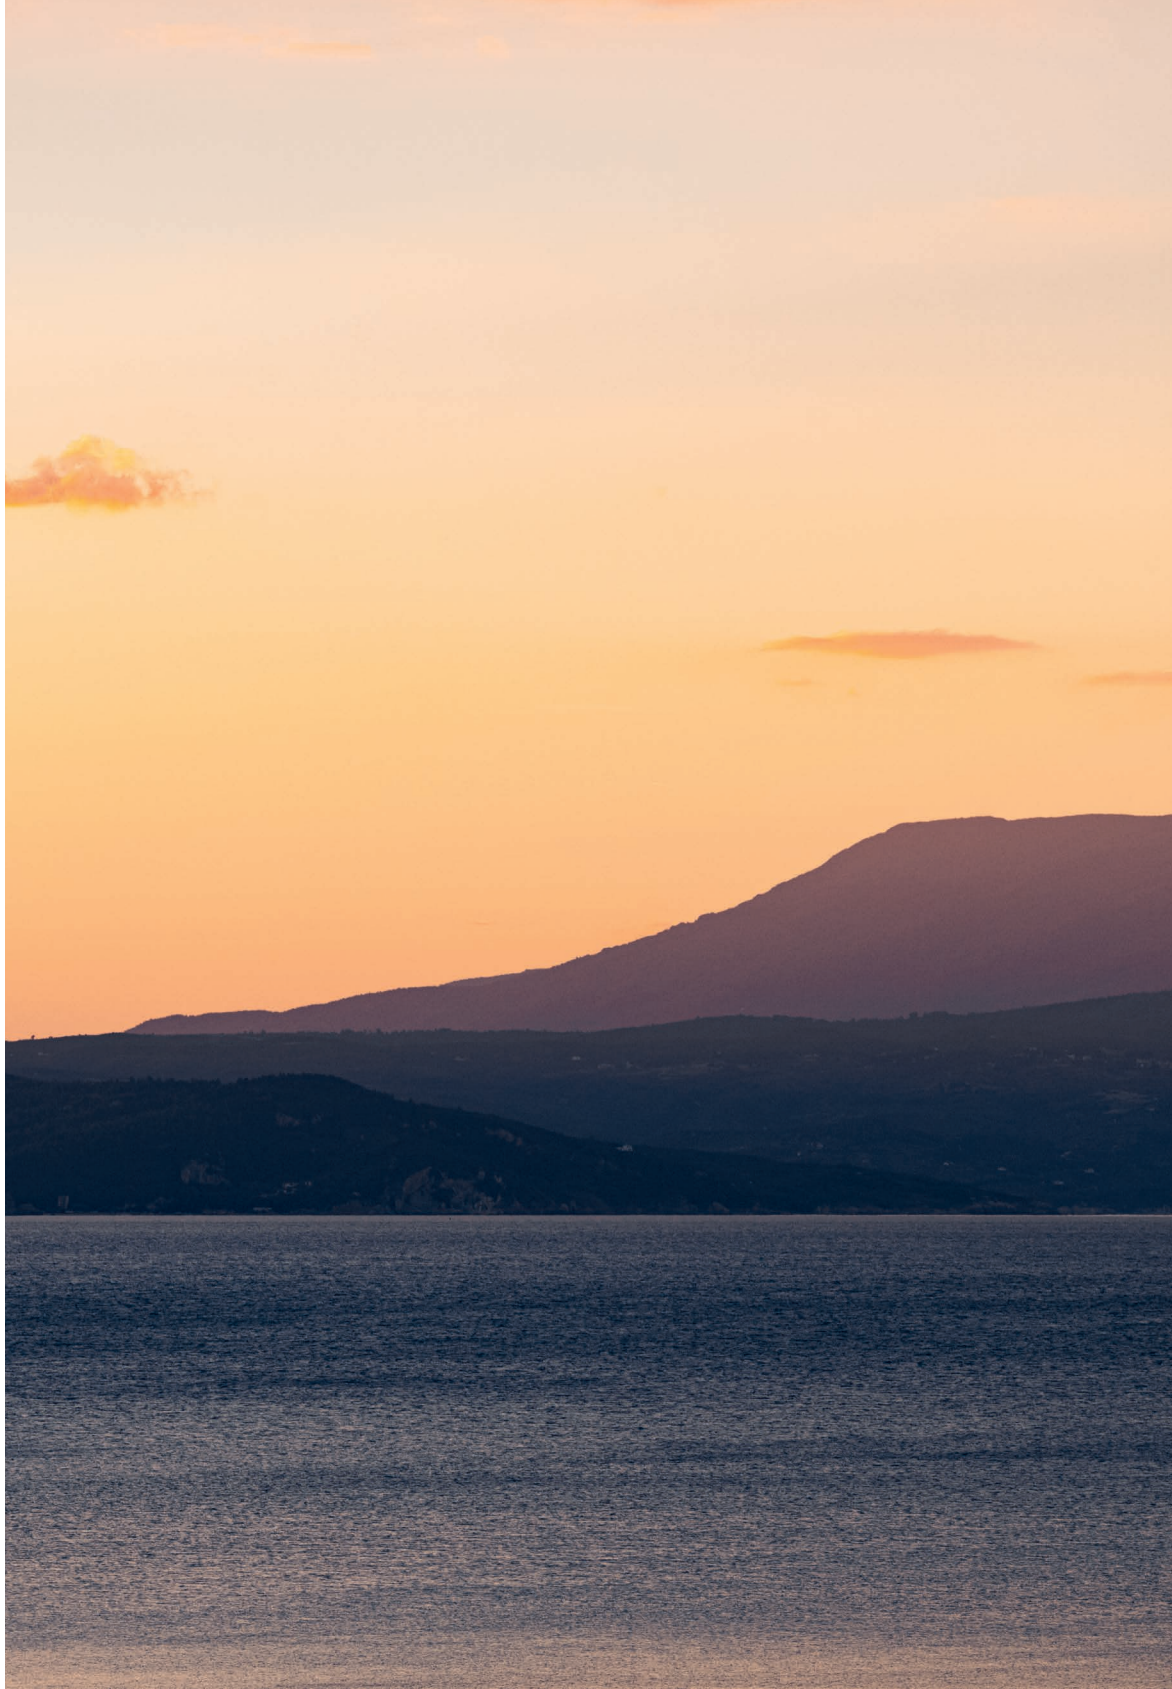

Lower Contrast

Maintains a natural colour impression and slightly increases visual details.

95%

Higher Contrast

Modifies colour impression and increases visual details.
